# The Developer Journey

The Marlowe Playground: [play.marlowe.iohk.io](https://play.marlowe.iohk.io)

## Exercise: "Await Timeout"

Create a contract which can be closed after a 3 min. timeout.

## Exercise: "Await Timeout"

[play.marlowe.iohk.io](http://play.marlowe.iohk.io)

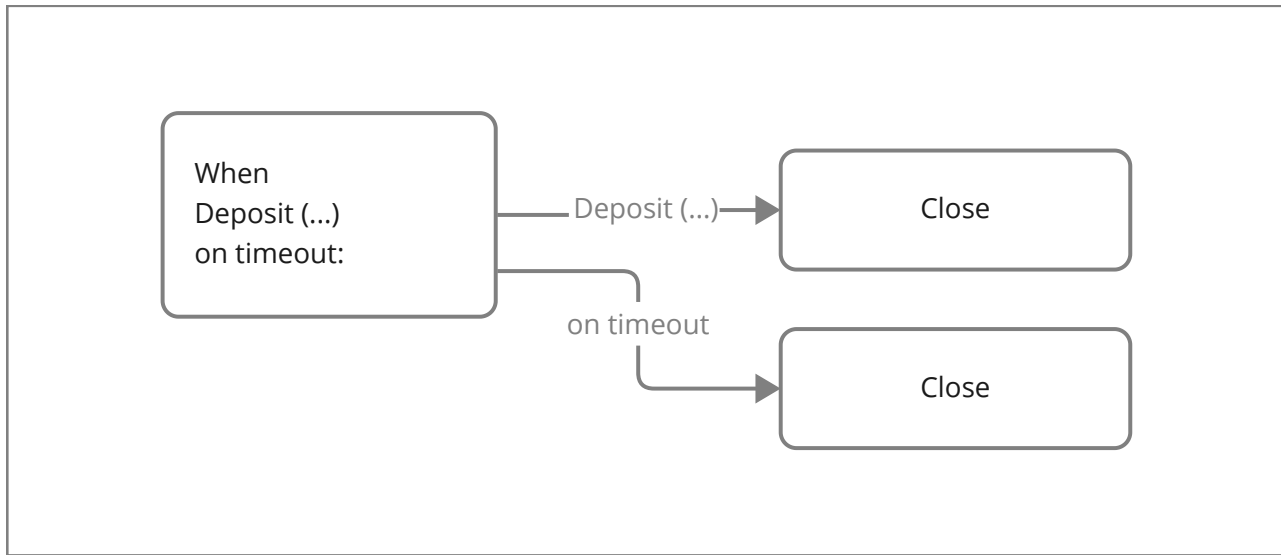

## **Exercise: "Buy Me a Coffee Request"**

We want to make a "buy me a coffee" (donation) request from some address to your address for a 1000 Lovelace. We want to put it on the blockchain so the other party can send the money.

To do this:

- We will need your own wallet address.
- The wallet address of the donor.

## Exercise: "Buy Me a Coffee Request"

[play.marlowe.iohk.io](http://play.marlowe.iohk.io)

[preprod.marlowe.runner.iohk.io](http://preprod.marlowe.runner.iohk.io)

## **"Deposit" Locks The Assets**

- Locked funds are controlled by the contract
- Depositor picks destination account

# "Deposit" Locks The Assets

- - - - - Smart Contract - - - - -

- - - - -

# "Deposit" Locks The Assets

# "Deposit" Locks The Assets

## **"Close" Releases The Assets**

- When we reach "Close" contract releases remaining assets
- The assets are paid out according to account state

# "Close" Releases The Assets

# "Close" Releases The Assets

# "Close" Releases The Assets

----- Smart Contract -----

-----

## **Exercise: "Coffee Plans"**

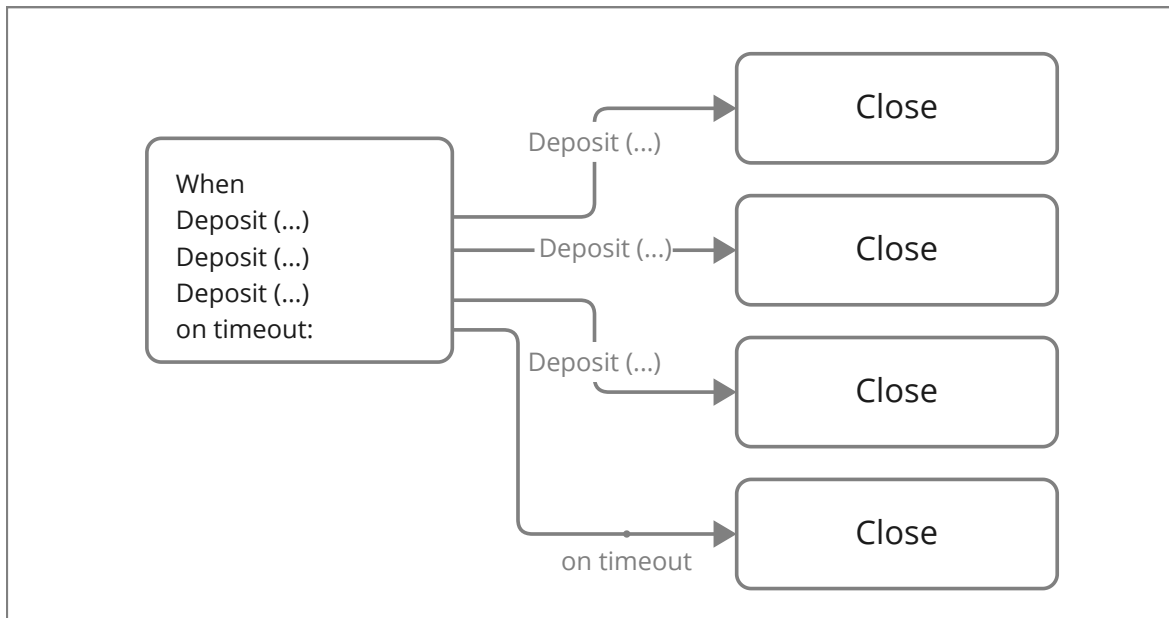

This will be a variation of the previous exercise except that we give the donor three donation options:

- 1 000 000 Lovelace (1 ADA)
- 5 000 000 Lovelace (5 ADA)
- 10 000 000 Lovelace (10 ADA)

Please switch roles in pairs.

[preprod.marlowe.runner.iohk.io](http://preprod.marlowe.runner.iohk.io)

## Exercise: "Saving Account"

- We want to save some money for the future (because we spend too much ;-)
- We want to lock 1000 Lovelace in the contract.
- Let's lock it for testing for 3 minutes.
- After this period we would like to unlock the funds.

## Exercise: "Saving Account"

## DApps Prototypes

- Vesting app: [vesting-preprod.scdev.aws.iohkdev.io](https://vesting-preprod.scdev.aws.iohkdev.io)
- Marlowe Runner: [preprod.runner.marlowe.iohk.io](https://preprod.runner.marlowe.iohk.io)

# Marlowe Runtime

## Marlowe and Your Dev Team

- Marlowe can be used from any programming language (on going integrations: Go, Rust, C#, Python, TypeScript,
- We are focusing on TypeScript/Javascript
- Marlowe Runtime is language agnostic (REST)

## Example: "On-Chain Betting"

----- Smart Contract -----

# Example: "On-Chain Betting"

# Example: "On-Chain Betting"

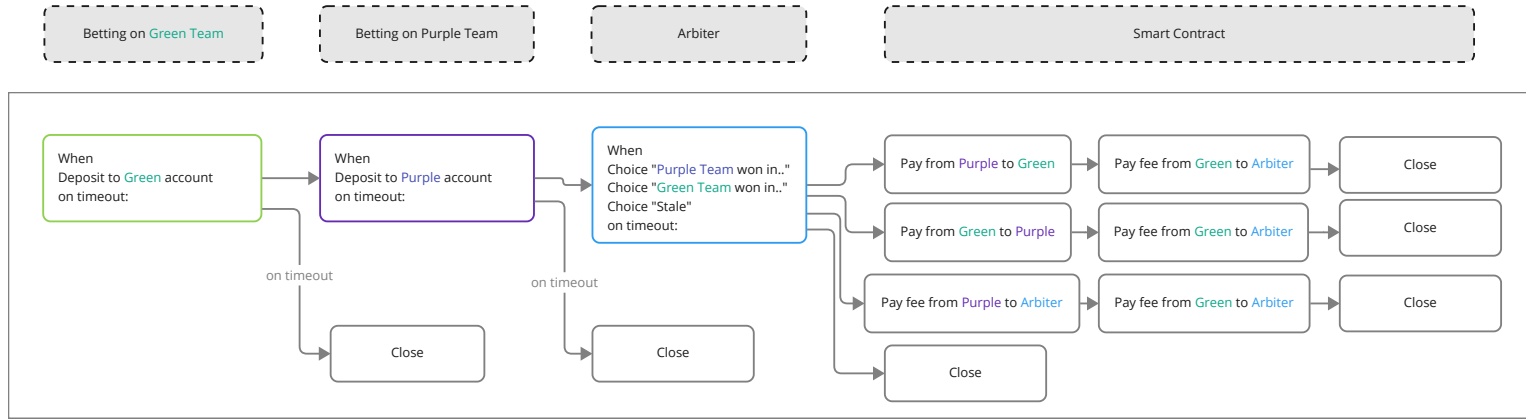

## Example: "On-Chain Betting"

# Example: "On-Chain Betting"

## Example: "On-Chain Betting"

Let's analyse this contract in [play.marlowe.iohk.io](https://play.marlowe.iohk.io)

## On-Chain Betting Benefits

- No up front deposits / account charging etc.
- Predictable cash flow
- Global reaching service
- Everything is transparent
- Arbiter has reputation at stake

**Thank you**

## Exercise: "Donation Request"

We want to make a donation request from your partner for a 1000 Lovelace. We want to put it on the blockchain so the other party can send the money.

To do this:

- We will need your own wallet address.
- The wallet address of the donor.

## Exercise: "Donation Request"

## **Exercise: "Flex Coffee Donation"**

This will be a variation of the previous exercise except that we give the donor full flexibility to pick a value between:

1 000 000 - 10 000 000 Lovelace

## Exercise: "Flex Coffee Donation"
